(a) whether: rise by exposure
easy pool, no event (168)
hard pool, no event (270)
lost to a higher-exposure winner (9)
top family, no event in its run (1)
event (14)
lowest exposure
of an event, 1.92
$\tau = 0.05$
largest rise of $e_f(t)$
exposure $256\,\hat{p}$ FPR (rewarded / step)
(b) which: 12 runs with an event
exposure
FPR alone
propensity alone
runs
rank of the first winner (of 14)
(c) when: event step by exposure
Spearman −0.84 (14 events)
permutation $p = 0.0003$
first event (12)
second event (2)
masked run (4)
fit to first events, slope −1.03
event step
exposure (rewarded / step)
